## Introduction

### What is Network Scanner?

**Network Scanner** is an IP scanner for network analysis that will allow you to see all network computers in several seconds.

## Before Installing

### How can I download Network Scanner?

To download and install Network Scanner please visit our [Download page](#).

### Will it run on my operating system?

The latest version of Terminal Services Manager supports the following Windows platforms: Windows 7, Windows Server 2008R2, Windows 8, Windows 8.1, Windows Server 2012, Windows Server 2012R2, Windows 10, Windows Server 2016

### System Requirements

To install and run Network Scanner, your computer will need the following minimum requirements based on your operating system:

Administrator privileges are required to properly install on Windows 7 or newer

Super VGA 800 x 600 video adapter

Microsoft® Internet Explorer® 8 or higher

Internet access is required to register and receive product updates

## Registration

### What limitations are there in an unregistered version?

Well, there are no functional limitations for unregistered versions and you may use Network Scanner (during the evaluation period) as a fully registered program but only on one computer in the network. In addition, unregistered versions of Terminal Services Manager display nag screens.

### Can I install network Scanner on more than one computer?

For every installation on a separate machine an additional license is required.

## I have lost my registration number. How do I get it?

If you have lost your license code you may request a copy be sent to you.

Please fill out the [registration information request form](#).
